[USB Splitter: Sabrent 4 Port](#)

OPTIONAL HARDWARE

HANDSFREE BARCODE SCANNER

The PDF created by VRCut Impose has a job template barcode placed at the top of the page for standard templates. By adding a barcode scanner to the Triumph cutter to easily start a job by reading this barcode.

Recommended Scanner: Symcode USB Automatic Barcode Scanner Scanning Bar code Reader with Hands Free Adjustable Stand.

Install directly to Cutter: Purchase a 1" square bracket at your local hardware store.

Note: The scan angle is extremely sensitive to achieve hands free scanning (there is a little white information card that describes this and provides barcodes for testing your scanner).

EXTERNAL SPEAKERS

There are voice commands that can be turned on to guide the cutting process. This is very useful to the cutter operator as they have another confirmation of which way to turn the paper and when the cutter is ready to cut. You can install external speakers via Bluetooth or USB connection. Bluetooth headphones are also a great idea in a noisy work environment.

USB SPLITTERS & POWER CONSIDERATIONS

Many PC tablets have only one USB port. You may need a USB splitter if you are connecting additional USB hardware. To assure you have sufficient power to the USB connection to the cutter, it is recommended to have a splitter that has an external power source and that the tablet is connected to power at all times.
